CRAYOLA MODEL MAGIC BUTTER SLIME

e EASY

WHAT YOU'LL NEED

- 'Crayola' Model Magic 400g
- 'Elmers' Glue
- Baking Soda
- Contact Lens Solution

INSTRUCTIONS

Step 1 – Pour out the entire bottle of a 4 oz 'Elmers' School Glue into the bowl and add ½ a tablespoon of baking soda and mix thoroughly.

Step 2 – Add 1 tablespoon of contact lens solution, mix until the mixture gets harder to mix or until the slime is easily coming off the bowl. It is important to not add too much contact solution to the slime mixture because it can cause the slime to become super stiff.

Step 3 – Once all the contact solution is added, your glue mixture should have a slime-like consistency.

Step 4 – In another bowl add ¼ cup of model magic and 1/8 cup of water and mix together until the model magic has started to dissolve and mixes well with the water. There may be excess water which is completely fine you will just add it to the overall mix.

Step 5 – Once you have both mixtures add them together either stirring or kneading them together until you have a smooth and well mixed slime.

Step 6 – To keep the slime from drying out keep it in a sealable plastic bag or air-tight container.
